## DAY 1 - Translating English to Math

Translate each phrase into an algebraic expression.

1. a) six more than three times a number
b) five less than one third a value
c) fourteen less than the square of a number
d) the sum of twenty and a number, divided by five
2. a) three times a length
b) fifteen percent of an area
c) increase in area by fifteen percent
d) three more than the product of five and a number

Translate the sentence(s) into an algebraic equation(s).
3. Four less than three times a 4. One third of a number, value, is two increased by two, is one
7. The age of a tree tripled and then decreased by 5 years is 25 years larger number is 113 .

Translate into TWO algebraic equations. Record let statements.
9. The sum of two numbers is 10. At a school concert, 355

12 . The difference is 10 . tickets were sold. There were 51 more student tickets sold than adult tickets.
11. Enrico weighs 7 kg more than Julian. The sum of their masses is 183 kg .

## DAY 2 - More Translating English to Math

Translate into TWO algebraic equations. Record let statements.

1. Yogi is 6 years older than Michelle. The sum of their ages is 26 .
2. The cost of admission to Fantasy World theme park totaled $\$ 120.50$ for a group of 11 children and 2 adults. The admission totaled $\$ 100$ for another group consisting of 7 children and 3 adults.
3. The Mackenzie, the longest river in Canada, is 1056 km longer than the Yukon, the second-longest river. The total length of the two rivers is 7426 km .
4. Candace and Dino run computer repair services. For a service call, Dino charges $\$ 50$, while Candace charges \$40. In addition, they each charge an hourly rate. Dino charges $\$ 30 / \mathrm{h}$ and Candace charges $\$ 35 / \mathrm{h}$
5. A restaurant that serves a buffet lunch has one price for adults and another price for children under 12. The Lopez family has two adults and three children under 12. Their bill was $\$ 49.00$. The Zeid family has three adults and one child under 12 . Their bill was $\$ 45.50$.

## DAY 5 - More Elimination Method

1. What are the 6 steps of elimination method?
2. Solve the systems and check the solutions.
A. $3 y-5+6 x=0$
B. $\begin{aligned} & 2 x-y=5 \\ & y+3 x+9=0\end{aligned}$

For the following problems:
a) Create let statements
b) Create TWO equations
c) Solve the System by Elimination Method
d) Write therefore statement - answering the question
3. Silvio invests $\$ 8000$ for his children's education. He invests part of the money in a high-risk bond that pays $5 \%$ interest per year, and the rest in a lower-risk bond that pays $3.25 \%$ per year. After one year, he has a total of $\$ 312.50$ in interest. How much did Silvio invest at each rate?
4. Tickets for a play cost $\$ 5$ for adults and $\$ 3$ for children. A total of 800 tickets are sold and total sales are $\$ 3600$.

How many adult tickets are sold?

## DAY 6 - Substitution Method

Solve the systems and check the solutions.
A.
$2 x+y=2$

## DAY 7 - More Substitution Method

For the following problems:
a) Create let statements
b) Create TWO equations
c) Solve the System By Substitution Method
d) Write therefore statement - answering the question

1. Malcolm is twice as old as Sundeep. The sum of their ages is 39 . find the ages of the boys.
2. The cost of printing a magazine is based on a fixed set-up cost and the number of pages to be printed. One printing company charges a $\$ 250$ set-up fee and $\$ 5 /$ page, while a second company charges a $\$ 400$ set-up fee plus $\$ 4 /$ page. What does the point of intersection represent?

Which company should Richard choose to print 175 pages?

For the following problems:
a) Create let statements
b) Create TWO equations
c) Solve the System By ANY Method
d) Write therefore statement - answering the question
3. Eleni rents a car on two separate occasions. The first time, she pays $\$ 180$ for 3 days and 150 km . The next time, she pays $\$ 180$ for 2 days and 400 km .
Find price per day and price per kilometer.
4. Logan's next fundraising event is dog grooming. A local dog groomer will charge a flat fee of $\$ 120$ plus $\$ 8$ per dog. Logan plans to charge customers $\$ 16$ per dog.

What is the minimum number of customers Logan needs to make money from this event?

5. Admission to the circus costs $\$ 8$ for adults and $\$ 6$ for children. A total of 900 tickets are sold and total sales are $\$ 6160$.
a) Write a system of linear equations to represent the situation.
b) How many children attended the circus?
6. The student council wants to hire a DJ for the school dance. Rappin' Ron charges $\$ 160$ plus $\$ 35$ per hour. The Pips charge $\$ 180$ plus $\$ 30$ per hour.
a) Write a system of linear equations to represent the situation.
b) How many hours must be played for the costs to be the same for both DJs?
c) Who should the student council hire for the party? Explain why.
