1 Four students try to solve the equation $5 \mathrm{x}-3=2 \mathrm{x}+9$.

The following table shows part of each student's solution.

| Nadine | $-12=3 \mathrm{x}$ |
| :---: | :---: |
| Paul | $-3 \mathrm{x}=6$ |
| Joseph | $6=3 \mathrm{x}$ |
| Michelle | $3 \mathrm{x}=12$ |

Which student is correct?

A Nadine

B Paul

C Joseph
D Michelle

2
Which of the following represents the expression $3(2 x+1)-3(5 x-4)$ in a simplified form?

A $\quad-9 x-9$

B $9 x-3$

C $\quad-9 x+15$
D $\quad-21 x-3$

3 Eric and Julie are each asked to solve an equation.

Who has correctly solved his or her equation?

F Eric only
G Julie only
H Both Eric and Julie
J Neither of them

4
Determine the value of x in the following equation:

$$
\frac{2 x}{3}+4=3
$$

A $-\frac{2}{3}$
B $-\frac{3}{2}$
C $-\frac{9}{2}$
D $\frac{21}{2}$

5 The cost, $C$, in dollars to print leaflets, $n$, is given by the formula $C=35+0.03 n$.

What is the cost of printing 900 leaflets?

A $\$ 27.00$
B $\$ 35.00$
C $\$ 37.70$
D $\$ 62.00$

6 The perimeter of triangle DEF is given by the expression $11 \mathrm{x}-15$.

Which expression shows the correct length of side EF?

A $\quad 4 \mathrm{x}-4$
B $\quad 4 \mathrm{x}-14$
C $\quad 7 \mathrm{x}-1$
D $\quad 7 \mathrm{x}-11$

7 Which value of $x$ satisfies the equation $5-2 x=9$ ?

F $\quad x=-7$
G $\quad x=-2$
H $\quad x=2$
J $x=3$

## 8 Marc's Measurements

Marc wants to investigate the relationship between a person's foot length and their height. He measures the foot length ( L ) and height (h) of each of the students in his class.

He discovers that the relationship can be represented by the equation $L=\frac{2}{5}+\frac{3}{20} \mathrm{~h}$.

Determine how tall a person would be if their foot length is $\mathbf{2 5} \mathbf{~ c m}$.
Show your work.

9 What Side?
The perimeter of the triangle below is $\mathbf{7 5} \mathbf{~ m}$.

Determine the measure of each side of the triangle.
Show your work.

## 10 Measuring Mass

The following table shows an expression for the mass of each of the four members of the Miller family.

| Member of the <br> Miller Family | Mass (kg) |
| :---: | :---: |
| Father | $4 \mathrm{x}+6$ |
| Mother | $3 \mathrm{x}-2$ |
| Daughter | $2 \mathrm{x}-6$ |
| Son | $\mathrm{x}+7$ |

The total mass of all four members of the Miller family is $\mathbf{2 5 5} \mathbf{~ k g}$.
What is the Mother's mass, in kg ?

## Bone Business

Scientists find that the height of a person, $h$, in centimeters, is related to the length of the person's femur bone, $f$, in centimeters, according to the following formula:

$$
h=69.09+2.24 f
$$

According to the formula, what is the length of the femur in a person who is $\mathbf{1 7 8} \mathbf{~ c m}$ tall?

Show your work.

12 Which of the following is equivalent to the expression below?

$$
-5+2(3 x-4)-1
$$

A $\quad-9 x+11$
B $\quad-9 x-5$

C $\quad 6 \mathrm{x}-10$
D $6 x-14$

Issam's father gave him a box of chocolate bars. Solve the following equation to determine how many chocolate bars he received.

$$
\frac{\mathrm{n}}{3}+8=\frac{3}{2}(\mathrm{n}-1)+\frac{1}{6}
$$

How many chocolate bars did Issam receive?

A 4
B 6
C 8
D 39

14 Temira needs to rent a car. She considers the following price equations, where $C$ is the total cost, in dollars, and $n$ is the number of days.

| Company | Equation |
| :--- | :--- |
| Rentway | $C=20 n+100$ |
| Cheapie's Rentals | $C=25 n+50$ |
| Cars Cars Cars | $C=50 n$ |
| Drive Away | $C=15 n+125$ |

Which company should she choose if she is planning to rent the car for at least 10 days?

## F Rentway

G Cheapie's Rentals
H Cars Cars Cars
$J$ Drive Away

The maximum number of tickets that can be sold for a school play is 350 .

The total profit earned, $P$, can be determined using the equation $P=4.50 n-1080$, where $n$ is the total number of tickets sold.
Which of the following statements is true?
A The maximum profit is $\$ 1080$
B The maximum profit is $\$ 1757$.
C The total profit is $\$ 0$ when 240 tickets are sold.
D The total profit is $\$ 0$ when 350 tickets are sold.

16
The cost of a field trip, $C$, as a function of the number of students on the trip, $n$, is represented by the equation:

$$
C=500+15 n
$$

How many students went on the field trip if the cost was $\$ 1025$ ?

A 15875 students
B 102 students
C 69 students
D 35 students

While experimenting with a toy rocket, Dan determines that he can model the rocket's height, $h$, in metres, with respect to time, $t$, in seconds, using the equation

$$
h=\frac{1}{2} t^{2}
$$

Which calculation correctly finds the value of $h$ when $t=10$ ?
a $\quad h=\frac{1}{2} \times 10^{2}$
c $\quad h=\frac{1}{2} \times 10^{2}$
$=\frac{1}{2} \times 100$
$=5^{2}$
$=25$
b $\quad h=\frac{1}{2} \times 10^{2}$

$$
=\frac{1}{2} \times 20
$$

$$
=10
$$

$$
\text { d } \quad \begin{aligned}
h & =\frac{1}{2} \times 10^{2} \\
& =\frac{1}{4} \times 100 \\
& =25
\end{aligned}
$$

18
Arlene correctly solved one of the following equations and got an answer of $\mathbf{x}=\mathbf{1 2}$. Which equation did she solve?

A $\quad 2 \mathrm{x}-3=27$

B $\quad \frac{\mathrm{x}}{4}+1=47$
C $\quad 5 x^{2}+6=726$
D $\quad 3(2 x-5)=5(x-1)$
