

If you didn't stay in the AP stream, how do you feel about your decision to drop it after being in the regular stream for awhile?	What key thing would you say enabled you to do well on journals or assignments	What key thing would you say enabled you to do well on tests	If you didn't do as well as you wanted, what prevented you from doing so?
I stayed in AP. Will never regret my decision.	Manage your work and things in on time. Try to never get behind in your work	EXTRA PRACTICE!	Misinterpretation of questions, silly mistakes...
I stayed in the AP stream, BEST DECISION, Highly recommended!	Staying on top of them. The new system of submitting the journals online really helped.	Doing the review online	My life
I stayed :)	Staying on task and doing them the day they were assigned	-extra practice for sure	Not keeping up with journals and assignments
I'm glad I did not drop out of AP stream	Asking for help from other students and also ensuring to keep up with journals everyday and not being too far behind.	My journals, my interest, Mrs k, extra practice, class review	Slacking off and not working as hard as I should have.
I regret it. It's a nice stream to follow for someone who enjoys math	Don't wait till the night before the test, do your assignment, understand, then complete them and ask questions as needed.	Late night extra practice and dark roast black coffee.	Studying harder and allocating more time for review
I miss class for extra curriculars often and you MUST be in class to truly succeed in this course or else you will quickly fall behind. That's what happened to me and I had to work twice as hard to catch up. Next, you need a lot of time at home to complete your homework each night. Sometimes the questions are very difficult and if you don't have at least an hour to truly commit and solve the hard problems, then you are not helping yourself	Paying attention in class will seriously help you, asking questions in class to make sure you know your stuff, and don't be afraid to ask for help! Mrs. K will always help if you reach out.	Review your notes and do lots of extra practice. It's one thing to know a formula but you need to know how to apply it in a variety of situations	Falling behind sometimes on assignments and journals and leaving extra practice to night before the test.
	Using the system with OneNote now, I did well to keep my mark up and make sure I don't fall behind. With the old system, I asked a lot of questions, talked to my classmates, and did journals for points.	If you do the reviews Mrs. K posts online, in my opinion you will be 100% ready for the test because she puts similar questions on. Reading over your journals is also really helpful!	PROCARCINATING, don't do it. Make sure you fully understand something when it's taught and don't study the last day before the test, it's harder to retain information that way.

If you didn't stay in the AP stream, how do you feel about your decision to drop it after being in the regular stream for awhile?

What key thing would you say enabled you to do well on journals or assignments

What key thing would you say enabled you to do well on tests

If you didn't do as well as you wanted, what prevented you from doing so?

1. Mrs K is a great teacher who makes time to actually help her students! Don't understand something? Email her, see her at lunch, or visit before/after school and she'll be able to clear up confusing stuff.
2. Because the AP stream sticks together, our group was close. We had a math group chat where people were always willing to lend a helping hand.

There is that feeling of connection between everyone in the class, thus we feel comfortable sharing each other's journals and assignments despite them potentially being wrong and correcting each other's work.

DO THE REVIEW, look over key concepts in journal, extra practice also entails bonus, don't miss out like I did many times, also Mrs. K is always available to help you if you don't understand something (take advantage of this opportunity).

From not taking the time to properly do my work and review it beforehand. As well as always relying on your peers work to fix your own, try to do the work yourself instead. Always do corrections in order to understand your mistakes and fix it, because if not it will not better your understanding of concepts and you may possibly remember the old way you answered the question, in which it was wrong. Also failing to ask Mrs k before the test day to clarify certain concepts I may not understand because I don't want to sound dumb, in which I should have instead so I would've done better on a question relating to the topic.

Honestly, I miss the class environment at times and the quality teaching I got from Mrs. K. It is not often in highschool that you get to be in a class with everyone who is just as smart or smarter than you. They were all so friendly and everybody was willing to help anyone at anytime (even at 2am). Then I took Mrs. K for granted! Cherish this teacher you have been blessed with. You won't find a more caring soul than the one teaching you advanced mathematics.

Don't wait too long after the lecture to complete the journal and assignment for the day. That way you don't forget what you learned and can apply it effectively. Also, if you finish the assignment and journal early in the day, you can compare your answers with your peers to ensure that they are correct.

I believe staying on track definitely helps with journals and not falling behind. In the assignment, you usually do questions that are similar to the ones left for you, try to use these ones you did in class for your benefit. With journals always revert back to your assignment pages and ask for help if you do need it, whether it's Mrs k or your peers within the class.

Doing the review the night before is super helpful and is a really good refresher of the unit. It helps you find out which stuff you need to work on before the test and then all you have to do is practice it, and the test is ezpz.

I did a lot of extra practice to get those bonus marks, and while getting that bonus you review everything too so it's basically doing two things that boost your test mark all in one go.

If you didn't stay in the AP stream, how do you feel about your decision to drop it after being in the regular stream for awhile?	What key thing would you say enabled you to do well on journals or assignments	What key thing would you say enabled you to do well on tests	If you didn't do as well as you wanted, what prevented you from doing so?
<p>I had a job and played rep sports plus three other classes! It just didn't work out. BUT those were the reasons why I dropped the course after grade 10!</p> <p>Regardless you shouldn't drop the course in grade 10! There is a big jump between grade 10 academic and grade 11 univerty functions. AP definetly helped me bridge the gap and succeed to get a 90+ in grade 11 functions. So I'm grateful for that. So cherish your time in grade 10 and if you think about dropping it, don't let the excuse me "It's too hard" drive your decision to drop it because you then have to ask "am i working hard enough?". Really ask yourself if you can succeed here and then you'll know!</p>	<p>Paying attention in class is key...and asking questions for concepts you don't understand when you have the time to do so</p> <p>I stayed on top of them. In the first two semesters of AP I didn't do my journals until the night before the test and i wouldn't say i was as successful as recently because I began doing them on the night of.</p> <p>-talking to peers within the class -the YouTube videos under outlines -the OneNote Dropbox thing!! It kept me so on top of my game!!! If there's one thing to keep, keep that!!</p>	<p>The option of extra practice definitely allowed me to do well in tests as it prepares you for what type of questions you may see in the test and refresh your memory in concepts you may have done in the beginning of the unit.</p> <p>1. Journals and Assignments are really well-formatted so they're useful when reviewing for tests. Don't underestimate them. 2. Incentive to actually do extra practice/review means that I actually do it. (And you should too)</p> <p>Extra practice was extremely beneficial. The more you do, not only the more bonus you get, but you also become more and more prepared for the test.</p>	<p>I didn't put as much effort as I should have, you get out what you put in. Don't slack on journals or homework, and always do the review before the test</p> <p>Sometimes you'll just get lazy or feel overwhelmed by the combined work from all your classes. If you find yourself stuck like this, try to revamp your studying/homework method. Work in breaks and don't multitask! Math + Netflix will take 5 hours for you to complete that journal which could've been done in 30 minutes. When I started working in breaks and studying smart, I found it easier to maintain my grades.</p>
